A versatile cement perfect for general use
and smaller jobs.

Service Excellence

With experienced people on the ground across the UK and Ireland, we offer an unrivalled level of hands-on support and guidance from our dedicated Sales and Service teams.

Sustainability

We are committed to decarbonising our cement production and we have made excellent progress already. 95% of raw materials are locally and responsibly sourced and we have also made significant investment in the use of alternative fuels to replace coal fuel used in cement production, which has substantially reduced our carbon emissions while providing an alternative use for landfill waste.

Flexible Delivery Solutions

Our unique multi-product portfolio allows versatility in your stock management, with specifically tailored loads. Delivery of mixed products results in cost savings for our customers and reduces our carbon footprint.
